Security

Configure security settings that impact your storage account.

Require secure transfer for REST API operations ☒

Allow enabling anonymous access on individual containers ☐

Enable storage account key access ☒

Default to Microsoft Entra authorization in the Azure portal ☐

Minimum TLS version

Permitted scope for copy operations (preview)

Network connectivity

You can connect to your storage account either publicly, via public IP addresses or service endpoints, or privately, using a private endpoint.

Network access *

☒ Enable public access from all networks

☐ Enable public access from selected virtual networks and IP addresses

☐ Disable public access and use private access

Enabling public access from all networks might make this resource available publicly. Unless public access is required, we recommend using a more restricted access type. [Learn more](#)

Private endpoint

Create a private endpoint to allow a private connection to this resource. Additional private endpoint connections can be...

Recovery

Protect your data from accidental or erroneous deletion or modification.

☐

Enable point-in-time restore for containers

Use point-in-time restore to restore one or more containers to an earlier state. If point-in-time restore is enabled, then versioning, change feed, and blob soft delete must also be enabled. [Learn more](#)

☒

Enable soft delete for blobs

Soft delete enables you to recover blobs that were previously marked for deletion, including blobs that were overwritten. [Learn more](#)

Days to retain deleted blobs

☒

Enable soft delete for containers

Tracking

Manage versions and keep track of changes made to your blob data.

☐

Enable versioning for blobs

Use versioning to automatically maintain previous versions of your blobs. [Learn more](#)

Consider your workloads, their impact on the number of versions created, and the resulting costs. Optimize costs by automatically managing the data lifecycle. [Learn more](#)

☐

Enable blob change feed

Keep track of create, modification, and delete changes to blobs in your account. [Learn more](#)

Step 4: Enable the support for customer-managed keys as all services.

The screenshot shows the 'Create a storage account' wizard in the Azure portal, specifically the 'Encryption' tab. The 'Encryption type' is set to 'Microsoft-managed keys (MMK)'. Under 'Enable support for customer-managed keys', 'All service types (blobs, files, tables, and queues)' is selected. A warning message states: 'This option cannot be changed after this storage account is created.' The 'Enable infrastructure encryption' checkbox is unchecked. At the bottom, there are 'Previous', 'Next', and 'Review + create' buttons. The Windows taskbar is visible at the bottom of the browser window.
